The Path to Peace of Mind

In 4 steps to a stable cloud application with worry-free IT-operations

You are responsible for business-critical applications—key metrics such as stability, availability, and cost efficiency are in your hands. In theory, everything should be running smoothly. But in reality, things aren't going as planned! Costs are significantly higher than expected, internal or external efforts have increased, availability is far below expectations, some business processes are not executable— and your stress level is through the roof.

Possible causes could be:

⟶ Lack of know-how (internally/externally) and lack of ownership

⟶ Silo mentality and lack of collaboration among stakeholders

⟶ Insufficient analysis, planning, and validation before the application's go-live

Our Action Plan for you

To ensure you gain lasting value from this offering, we guarantee the following:

Deliverables:

✓ **Architectural sketch f**or infrastructure setup for your application in Azure

✓ **Optimization recommendations** for the software architecture to ensure stable operations

✓ **Best Practices** from other projects

✓ **Clarity about the implementation scenario** based on validated reference architectures

✓ **Timeline, next steps, and concrete to-dos** for a successful Azure journey

✓ **Clear cost framework** for setting up the Azure infrastructure, adjustments, and future operations

Perfect for:
- Head of IT / Infrastructure
- Application & Project Managers
- IT-Architects

After our collaboration, you'll have **guaranteed clarity** on how your application can be securely and stably operated in the cloud, what it will cost, and what steps you should take next.

6-8 hours of effort on your part, spread over 1-4 weeks
